Diogo Ramires

Almada, Portugal | dbramires@gmail.com | (+351) 964470366 | Portfolio: https://publicprojects-dr.streamlit.app

Data & Analytics Engineer | Data Solutions Architect & Technical Analyst

With over 15 years of experience across retail, banking/financial operations, telecommunications, and healthcare, I translate business, regulatory, and user needs into governed data architectures (Medallion Lakehouse across BigQuery, DuckDB/Parquet, Databricks, and Microsoft Fabric), Single Sources of Truth (SSOT), and measurable P&L impact. Rather than writing theoretical specifications in isolation or coding without business context, I work alongside frontline teams to map broken processes (As-Is/To-Be), audit legacy SQL logic directly, and deliver scalable data models and product specifications. My background includes refactoring systems supporting €70M+ in annual transaction volumes, cutting critical ETL runtimes from 24 hours to 15 minutes, and leading change management across 250+ daily active users.

CORE COMPETENCIES & TECHNICAL STACK

"If code is law, governance is God." Tools evolve every five years, but data physics and architectural rigor are what separate scalable systems from operational chaos.

- **Data Architecture, BI & Analytics Engineering:** Advanced SQL (PostgreSQL, T-SQL, KQL), Databricks, Snowflake, dbt, Google BigQuery, DuckDB, Apache Parquet, Microsoft Fabric, Azure, GCP, Azure Data Factory, Hadoop/Spark, PySpark, Scala, Power BI, Qlik Sense, IBM Cognos, Apache Superset, Looker Studio, Data Science, Data Mining, Data Marts (SSOT), Medallion Architecture, Erwin Data Modeler, Voice of Customer (VoC) KPIs.
- **Business Analysis, Strategy & Transformation:** Business Transformation, Change Management, Process Optimization, Data Strategist, Requirements Gathering, User Stories & Acceptance Criteria, As-Is/To-Be Process Mapping, Functional Specifications, Backlog Refinement, UAT & Data Reconciliation, Data Governance, Agile/Scrum, Confluence & Jira/Azure DevOps.
- **Cloud Ecosystems, Enterprise Platforms & Applied AI:** REST APIs, Webhooks, CI/CD (Cloud Build, GitHub Actions), GCP Cloud Run, Enterprise Integrations (SAP, OCP, Genesys, Avaya, Salesforce/CRM), Office 365 Admin (250+ Users), Google Workspace Business Admin, Applied AI & NLP (Vertex AI/Gemini, RAG Pipelines, Vector Embeddings, Audio ASR & Diarization via WhisperX/pyannote, Brandwatch), React.js, TypeScript, Python, Git.

PROFESSIONAL EXPERIENCE

BringGlobal | Lisbon, Portugal (2022 – 2025)

Senior BI & Data Engineer / Technical Business Analyst

- **Pharmaceutical Turnaround & System Refactoring:** Mapped and optimized retail pharmacy and laboratory data ecosystems (85+ pharmacies, €70M+ annual transaction volume), enforcing strict Data Governance and financial reconciliation. Audited legacy business logic, translated business needs into functional/technical specs, refactored 5,000+ lines of SQL, reduced database tables by 50%, and prepared the migration roadmap to Microsoft Fabric—cutting critical ETL times from 24 hours to 15 minutes, reducing maintenance effort by 75% (~1,600h to ~400h/year), securing a €100k+/year contract, and restoring reporting reliability for the CFO.
- **Core Banking Transformation (Egypt) & Databricks Migration:** Part of the architecture team mapping legacy on-premise Big Data scripts (Hadoop/Spark, MapReduce, Scala, SQL), fact/dimension tables, and historical banking formulas into a modern target analytical data model. Temporarily supported the banking engineering team in preparing and refactoring legacy SQL codebases for migration to Databricks.
- **South American Telecom Strategy (McKinsey Partnership):** Acted as the analytical bridge between McKinsey strategy consultants and engineering teams for the South American telecommunications sector,

clarifying requirements, unblocking data dependencies, and delivering complex analytical models in Apache Superset within weeks to drive B2B expansion.

- **Telecom Legacy Operations (Entel Chile) & Internal BI Co-Management:** Provided technical backup and hands-on support for Entel (Chile) across complex, deeply entrenched legacy SQL procedures, while co-managing BringGlobal's internal operational and BI/Analytics systems.

Tech & Tools: Advanced SQL, PostgreSQL, Data Governance, Business Transformation, Change Management, Process Optimization, Databricks, Snowflake, dbt, CI/CD, Hadoop/Spark, PySpark, Scala, Microsoft Fabric, Azure Data Factory, Power BI, Apache Superset, Erwin Data Modeler, Agile/Scrum.

IKEA | Lisbon, Portugal (2014 – 2022)

Consumer Insights & Omnichannel CX Data Lead | Business Data Architect

- **Consumer Insights & Omnichannel CX Analytics Lead:** Led the analytical and data strategy across Consumer Insights and Omnichannel Customer Experience, designing Voice of Customer (VoC) KPIs that informed the Global Performance framework. Analyzed customer behavior and feedback (via NLP/Brandwatch, Data Mining, and web telemetry) to identify operational pain points and structure the frontline Knowledge Base.
- **Cross-System Integration & SSOT:** Eliminated departmental silos ("Excel Hell") by integrating contact center telemetry (Avaya, Genesys) with core ERP/billing systems (SAP, OCP) into centralized Power BI Data Marts serving 250+ daily users.
- **Workflow Optimization & Operational Support:** Defined functional workflows, monitoring tools, and system requirements that enabled operational and sales teams to reduce sales errors from >30% to <7%, cut logistics costs by 20–30%, and increase Omnichannel SLA performance from <9% to >90%.
- **Change Management, Governance & Executive Alignment:** Administered the unit's Office 365 collaboration environment (250+ users), maintained functional documentation, led user onboarding across operations, and partnered with C-Level leadership using Cost-to-Serve and root-cause analysis (including SEM modeling) to link operational quality to national P&L margins.

Tech & Tools: Power BI, SQL, Azure, GCP, BigQuery, SAP, OCP, Genesys, Avaya, IBM Cognos, Qlik Sense, Data Science, Data Mining, Data Strategist, Brandwatch (NLP), Data Marts (SSOT), Data Governance, Business Transformation, Change Management, Process Optimization, Office 365 Admin.

Active R&D & Advisory Projects | Lisbon, Portugal (2025 – Present)

Senior Analytics Engineer & Data Solutions Architect (Cloud, Lakehouse & Applied AI)

- **Hybrid Medallion Lakehouse & Econometric Modeling:** Translated operational bottlenecks into functional specifications, user stories, As-Is/To-Be workflows, and acceptance criteria across four functional systems. Designed a hybrid Medallion Data Lakehouse combining Google BigQuery and local in-process OLAP (DuckDB over Apache Parquet) with automated CI/CD pipelines (Cloud Build/GitHub webhooks), Data Quality checks, and FinOps auditing. Integrated longitudinal macroeconomic, trade, housing effort, rare goods, and legislative/discourse datasets into pre-calculated BI models (implementing Dalton, Esteban-Ray, and RILE polarization metrics, Z-score normalization, and NUTS GIS layers in Looker Studio), alongside Galaxy Schema deduplication for time-series pricing (Collection_App).
- **Deterministic Audio ASR, Diarization & Voice Biometrics:** Engineered an automated audio ingestion and verbatim transcription pipeline (WhisperX and Wav2Vec2 word/phoneme alignment, intentionally excluding generative LLMs at the transcription layer to ensure zero hallucination). Integrated acoustic speaker diarization (pyannote) with voice biometric embeddings matched via Cosine Similarity into Apache Parquet, routing low-confidence vectors to a deterministic Human-in-the-Loop validation queue.
- **Applied AI Governance & Offline-First Architecture:** Replaced fragile manual spreadsheet lookups (VLOOKUP) by building a serverless hybrid AI reconciliation pipeline on GCP Cloud Run (multimodal Gemini OCR + Vector Embeddings with Cosine Similarity and a 65%–82% confidence validation funnel to protect database integrity). Built an offline-first logistics web app in React.js/TypeScript (TripMillennium) and administered the project's Google Workspace Business Standard environment.

Tech & Tools: GCP (BigQuery, Cloud Run, Cloud Build), DuckDB, Apache Parquet, SQL, Python, WhisperX, pyannote (Voice

Biometrics), Vertex AI (Gemini, Embeddings, RAG), Data Governance, React.js, TypeScript, Tailwind CSS, REST APIs, Webhooks, CI/CD, Git, Google Workspace Business Admin.

Banco BPI, Millennium BCP & Central de Cervejas | Portugal (Up to 2014)

Sales & CX Operations Analyst

- **Banking & Commercial Foundation:** Managed B2B portfolios (Central de Cervejas) and executed frontline banking customer service and commercial campaigns at Banco BPI and Millennium BCP, building a solid foundation in financial products, credit/commercial workflows, and translating end-user pain points into reporting requirements.

Tech & Tools: Banking Operations, Credit Workflows, Commercial Campaigns, B2B Portfolio Management, CRM, Operational Reporting.

EDUCATION

- **Post-Graduate Degree in Digital Enterprise Management** | Nova Information Management School (Nova IMS)
- **Master of Science in Management (Thesis Grade: 17/20)** | ISEG - Lisbon School of Economics and Management
- **Bachelor of Science in Political Science** | ISCSP - University of Lisbon
